## 2300/2600 Bi-Sector™ Array

BSA-S65R-V-H3

- Three foot (1.1 m), four port, dual beam antenna with patented asymmetrical beam shapes optimized for LTE
- Two wideband 33° beams to match existing 65° patterns, covering 2300-2690 MHz
- One pair of +45° and -45° cross-polarized ports for each beam
- Slim and low weight single panel design supporting two beams in a single antenna
- Field replaceable, integrated AISG 2.0 compliant Remote Electrical Tilt (RET) system with independent tilt control for each beam
- Dramatic increase in site capacity through higher order sectorization which offsets the need to build new sites
- Boosts data throughput by minimizing interference and optimizing coverage
- Sharp elevation beamwidth aides in network planning
- Optimal elevation sidelobe performance
- Exceeds minimum PIM performance requirements

### Overview

The CCI 2300/2600 Bi-Sector™ array is a dual beam antenna with full WCS and 2600 band coverage. With two pairs of wideband ports covering 2300-2690 MHz, this three foot (1.1 M) CCI Bi-Sector™ provides the capability to deploy two beams (sectors) in a single antenna. The antenna allows separate tilt control for each beam individually, enabling maximum flexibility in network deployment. This antenna is available in both a Remote Electrical Tilt (RET) and a Variable Electrical Tilt (VET) configuration.

CCI's unique patented bi-sector technology provides optimized overlap between the pairs of asymmetric beams, lowers soft handover losses in LTE, UMTS/HSPA+ and CDMA/EVDO systems, while minimizing interference between sectors. Fast roll-off of each of the outer beams and high front-to-back ratios ensure reduced interference. This patented approach enhances data transfer rates within LTE, UMTS and EVDO network sectors and addresses "hotspots" in mobile wireless operator networks.

The single panel design of the Bi-Sector™ Array offers the opportunity to reduce antenna count and directly replaces an existing 65° antenna without mount changes and avoids costly leasing and zoning changes. The enhanced coverage matches the existing sector footprint and minimizes the need for optimization and adjacent site changes, providing operators with significant CAPEX and OPEX cost savings.

CCI antennas are designed and produced to ISO 9001 certification standards for reliability and quality in our state-of-the-art manufacturing facilities.

### Applications

- Delivers increased capacity and data-throughput for sites that are performance or capacity constrained
- Provides a higher level of spectrum reuse making it an ideal solution for spectrum limited markets
- Increase capacity without the need for new site builds or carrier adds and without using valuable spectrum resources
- Efficient use of spectrum makes it ideally suited for spectrum clearing and refarming
