Overview

The CCI TriBand array is a eight port antenna, with four wide high band ports covering 1695-2690 MHz and four wide low band ports covering 614-896 MHz. The antenna provides the capability to deploy 4x4 Multiple-Input Multiple-Output (MIMO) in the high band and 4X4 MIMO across low band ports.

In this two RET configuration, the 1st RET is dedicated for the four Low Band ports. The 2nd RET is dedicated for the four High Band ports. This RET arrangement allows for complete flexibility in coverage control between low and high band antenna arrays.

CCI antennas are designed and produced to ISO 9001 certification standards for reliability and quality in our state-of-the-art manufacturing facilities.

Applications

- 4x4 MIMO for the High Band and 4X4 MIMO Low Band ports
- Ready for Network Standardization on 4.3-10 DIN connectors
- With CCI's TriBand antennas, wireless providers can connect multiple platforms to a single antenna, reducing tower load, lease expense, deployment time and installation costs
